

Yea-Sacc¹⁰²⁶ is a live yeast culture based on *Saccharomyces cerevisiae* strain 1026, a yeast strain specifically selected for its influence on animal performance.

Feed efficiency - getting more from your feed.

Feed efficiency comes from an optimized rumen environment. The longer the rumen stays above a pH of 6.0 the greater the digestion efficiency. Yea-Sacc stimulates the bacteria responsible for acid removal, elevating rumen pH, leading to more efficient digestion.

Dry Matter Intake Fluctuations

Yea-Sacc accelerates the flow of feed and forage through the rumen, reducing rumen “fill” to allow increased consistency in dry matter intake.

Yea-Sacc optimizes rumen function resulting in:

More milk – 1.7 litres

More efficiently – 6%

Without compromising fertility – 5-7 less open days.

BIOSAF the benefits,

- increase in DWG.,
- increase in FCR.,
- better carcass quality
- and a net return of **€40 per animal.**

NOVATAN

Protein Protection

Protects total diet protein, including forage.

- Based on essential oils & trace minerals.
- Researched by Techna in INRA France.
- Modifies rumen bugs to increase PDI.
- Increases milk yield 1.5-2.5 kg/day
- Increases milk Protein 0.1-0.2%
- Widely used in France.
- Unique to Gain in Ireland.
